Haider Ali

Senior Java Developer | Spring Boot | Microservices | Cloud-Native Systems

London, United Kingdom | +44 7741 263786 | haider0017@hotmail.com | linkedin.com/in/haider0017 | github.com/haali512

Full-time UK working rights

Professional Summary

Senior Java Developer with 6 years' experience building scalable enterprise Spring Boot microservices for a US-headquartered platform serving 40+ enterprise clients and 80,000+ users. Specialises in solving complex backend problems, from decomposing a legacy monolith into event-driven services to owning cloud infrastructure, CI/CD and production releases at 99.9%+ uptime. Led a team of 4 and mentored 10+ engineers. MSc Computer Science (Distinction), University of Greenwich; London-based and available immediately.

Technical Skills

- **Core:** Java 11/17/21, Spring Boot, JPA/Hibernate, REST APIs, Microservices, Event-Driven Architecture, RabbitMQ, Kafka, gRPC, SQL
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, API Gateway, RDS, CloudWatch), GCP (Cloud Run), Docker, Kubernetes, Terraform, Jenkins, GitLab, CI/CD, Git, Maven, Prometheus, Grafana
- **Data & Search:** PostgreSQL, MySQL, NoSQL, Redis, Elasticsearch
- **Security & Testing:** Keycloak, OAuth2/OIDC, JWT, SSO, JUnit, Mockito, TDD, integration testing
- **Also:** Python (FastAPI), TypeScript, JavaScript, React, Angular, WebSockets, GitHub Copilot, Claude Code, Agile/Scrum

Work Experience

Global Rescue LLC **Sep 2019 – Sep 2025**
Islamabad, Pakistan (engineering office of US-headquartered company) *Full-time*

Travel risk management and crisis response provider; platform serves 80,000+ enterprise and consumer users worldwide.

Senior Software Engineer *Jan 2024 – Sep 2025*

- Core engineer in the migration of a legacy enterprise monolith into **22+ Spring Boot microservices**, enabling independent, faster and safer releases.
- Led a team of **4 developers and a 2-person Application Support team**; ran 30+ technical interviews, hired 3 engineers and mentored **10+ engineers** across the company.
- Delivered the core traveller-tracking module, a key product differentiator that helped secure **3+ enterprise clients**.
- Made the **architectural decision** to move non-critical inter-service calls to **asynchronous messaging** with RabbitMQ, cutting API response times by **23%** and protecting time-sensitive customer journeys from lower-priority workloads.
- Implemented Elasticsearch-powered search, reducing response times from 2 seconds to under **300ms** (85% faster).
- Built and owned **CI/CD pipelines** (Jenkins, Docker, [AWS]) and production releases, shortening release cycles from weeks to days while sustaining **99.9%+ uptime**.
- Embedded automated testing and peer review into everyday delivery and introduced GitHub Copilot and AI coding assistants for test writing and refactoring, reaching **65%+ unit and integration test coverage** and reducing defects in production.
- Partnered with US-based senior stakeholders and product management to refine requirements and priorities, delivering **3 additional features per quarter**.
- Provided **L3 production support**, leading root-cause analysis on complex incidents and feeding the fixes back into engineering practice.

Software Engineer *Jan 2022 – Dec 2023*

- Built loosely coupled Spring Boot microservices as part of the monolith decomposition, enabling independent releases and lowering the risk of platform-wide disruption for **thousands of daily users**.
- Implemented Keycloak-based authentication, authorisation and SSO, migrating **100% of users** to centralised access control.
- Migrated **2M+ business-critical records** for **40+ enterprise clients** from the legacy platform to the new system.
- Delivered client and admin portals for dashboards, account and user management and reporting, enabling

self-service for **80,000+ users**.

- Rebuilt the mass-communication client portal, cutting load time from 2 minutes to under a second.
- Took ownership of production deployments, cutting the external DevOps team's deployment effort by **30%**.
- Provided Level 2 production support, resolving live incidents on business-critical services.

Associate Software Engineer *Sep 2019 – Dec 2021*

- Built parsers and integration APIs for Global Distribution System (GDS) travel-data feeds, removing manual data submission and saving each enterprise client around **3 hours per week**.
- Automated scheduled client report delivery, saving client teams around **4 hours per week**.
- Built automated test coverage from scratch to **30%+** across key workflows, catching regressions before release.

Projects

Road Traffic Accident Detection & Real-Time Dashboard (MSc Dissertation) **Sep 2025 – Aug 2026**
Python, PyTorch, FastAPI, React, TypeScript, PostgreSQL, Docker, GCP (Cloud Run)

- Shipped a JWT-authenticated FastAPI backend on Google Cloud Run with PostgreSQL and Auth0 OAuth2/OIDC, plus a React/TypeScript dashboard with live WebSocket alerts and CSV/PDF export.
- Built a deep learning pipeline classifying dashcam video with a fine-tuned R(2+1)D-18 computer-vision model, raising accuracy from 59.4% to 73.8% and accident-class F1 from 0.436 to 0.643.

Education

MSc Computer Science – Distinction **Sep 2025 – Aug 2026**
University of Greenwich *London, United Kingdom*

BSc Computer Science **Aug 2015 – Aug 2019**
FAST National University of Computer & Emerging Sciences (NUCES) *Islamabad, Pakistan*

Awards

- **Developer of the Year (2021–2022)** and **Rising Talent of the Year (2020–2021)**, Global Rescue LLC.
